

Recertification of particulate filters

EN 143:2007 -> EN 143:2021

Walddorfhäslach, 06.05.2024

EN 143 was revised and published in July 2021. The EU Commission harmonised it in December 2022. There is a transitional period until June 2024. As part of the recertification of our products, all particle filters were recertified in accordance with the new EN 143:2021.

This revision of the standard has no effect on our product properties. The following changes have been made compared to DIN EN 143:2007:

- Labelling of filters has been changed (NR, R and D omitted)
- Double filter symbol and user information symbol have been added
- clogging is deleted
