

# valsir®

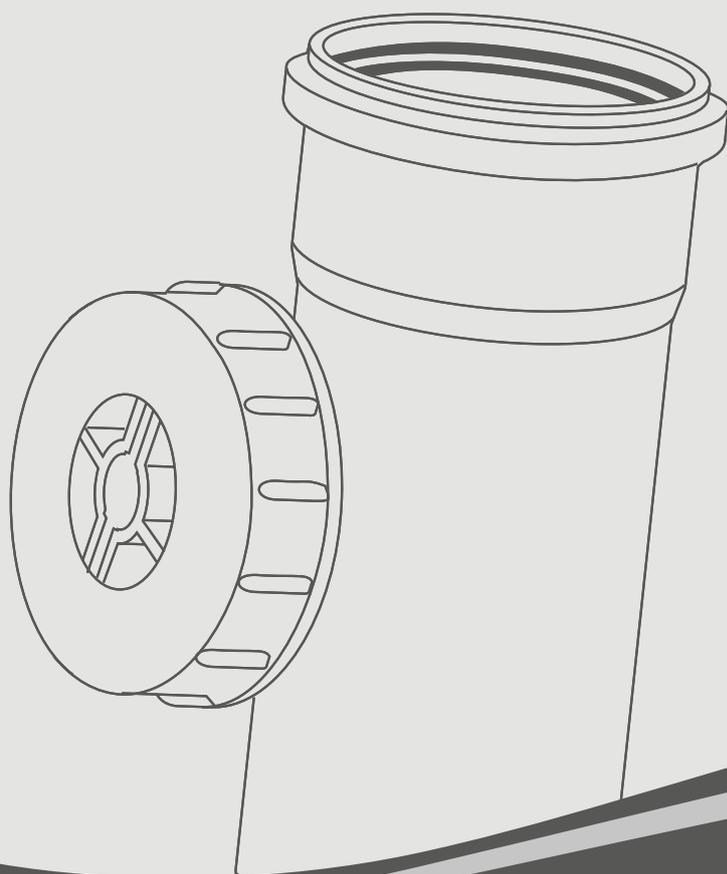

QUALITY FOR PLUMBING

## PP

### Sistema di scarico in polipropilene autoestinguente ad innesto. *Push-fit flame retardant polypropylene waste and drainage system.*

- ✓ Estrema facilità e velocità di posa.
- ✓ Grande resistenza alla corrosione.
- ✓ Nessuna operazione di saldatura o incollaggio.
- ✓ Nessuna particolare attrezzatura richiesta per la sua installazione.
- ✓ Grande resistenza alle temperature elevate (fino a 95°C continui).
- ✓ *Easy and fast installation.*
- ✓ *Excellent corrosion resistance.*
- ✓ *No welding or gluing operations required.*
- ✓ *Installation does not require the use of special tools.*
- ✓ *Good resistance to high temperatures (up to 95°C continuous).*

## Sistema di scarico in polipropilene autoestinguente ad innesto

### *Push-fit flame retardant polypropylene waste and drainage system*

#### CARATTERISTICHE E PROPRIETÀ DEL SISTEMA

Il polipropilene (PP) viene impiegato da Valsir nella realizzazione di tubi e raccordi ad innesto con guarnizione per scarichi.

Le normative consentono l'uso del PP all'interno dei fabbricati per uso civile ed industriale ad una temperatura massima di 95°C per scarichi non in pressione. In particolare, le applicazioni per il PP vengono definite dalla normativa di riferimento (EN 1451) nel modo seguente:

- apparecchi sanitari;
- lavatrici, lavastoviglie, scaldabagni;
- grandi cucine, lavanderie, impianti industriali;
- pluviali all'interno della struttura dell'edificio;
- laboratori e fabbricati scolastici, universitari e industriali dove si utilizzano fluidi aggressivi (per la resistenza del PP agli agenti chimici verificare la compatibilità nelle tabelle presenti nel nostro manuale tecnico);
- colonne e impianti di ventilazione.

I tubi e raccordi in PP di Valsir assicurano i seguenti benefici:

- perfetta tenuta grazie alla guarnizione in elastomero;
- estrema facilità e velocità di posa;
- resistenza alla corrosione;
- compatibilità con oltre 700 agenti chimici;
- nessuna operazione di saldatura o incollaggio;
- nessuna particolare attrezzatura richiesta per la loro installazione;
- grande resistenza alle temperature elevate (fino a 95°C);
- grande resistenza, in confronto ad altri materiali plastici, alla scalfittura superficiale e all'abrasione.

In particolare, rispetto alle tubazioni metalliche, il PP ha una maggiore facilità di giunzione, una superiore flessibilità e una maggiore resistenza alla corrosione. Rispetto ad altri materiali plastici, ha una maggiore facilità di giunzione ed essendo prodotto in materiale autoestinguente limita la propagazione al fuoco nel caso d'incendio.

#### FEATURES AND PROPERTIES OF THE SYSTEM

*Polypropylene (PP) is used by Valsir to manufacture push-fit pipes and fittings with seals for waste and drainage installations.*

*The reference standards allow the use of PP inside the building for civil and industrial use at a maximum temperature of 95°C for non-pressure applications. In particular, PP is used for the following applications defined by the reference standard (EN 1451) in the following way:*

- *sanitary fixtures;*
- *washing machines, dishwashers, hot water cylinders;*
- *commercial kitchens, laundries, industrial plants;*
- *rainwater systems inside the building;*
- *aggressive effluents used in laboratories and schools, universities and factory buildings (resistance of PP to specific chemicals to be ascertained by consulting the tables in our technical manual);*
- *ventilation stacks and systems.*

*Valsir PP pipes and fittings provide the following advantages:*

- *perfectly leak proof system thanks to the elastomeric double-lipped ring seals;*
- *extremely easy and fast installation;*
- *corrosion resistance;*
- *resistant to over 700 chemicals;*
- *no welding or gluing operations necessary;*
- *installation does not require the use of special tools;*
- *good resistance to high temperatures (up to 95°C continuous);*
- *in comparison with other plastic materials, polypropylene is highly resistant to scratching and abrasion.*

*In particular, compared with metal pipes, PP offers easier jointing, greater flexibility and greater resistance to corrosion. In comparison with other plastic materials, it is easier to connect and its flame retardant properties limit the spreading of flames in the case of a fire.*

Il polipropilene ha un coefficiente di dilatazione lineare pari a:

$$\lambda = 1,1 \times 10^{-4} \cdot ^\circ\text{C}^{-1} \text{ pari a } 0,11 \text{ mm/m} \cdot ^\circ\text{C}$$

È opportuno notare che il sistema PP di Valsir, essendo caratterizzato da giunzioni ad innesto con guarnizione, non necessita di bicchieri di dilatazione, in quanto ogni giunto, se correttamente installato, consente al materiale le dilatazioni e le contrazioni dovute alle variazioni di temperatura.

## Materiale

I tubi e raccordi in PP vengono prodotti da Valsir con polipropilene omopolimero autoestinguente in conformità alle norme europee ed internazionali in vigore.

## Colore

I tubi ed i raccordi in polipropilene autoestinguente Valsir sono prodotti in colore grigio stabilizzato all'esposizione dei raggi UV (RAL 7037). Essi si presentano lisci, lucidi e privi di irregolarità tali che ne possano compromettere la funzionalità.

## Marcatura

Secondo la normativa UNI EN 1451-1, attualmente in vigore, i tubi PP di Valsir riportano:

- norma di riferimento (EN 1451);
- area di applicazione (B);
- specifica del materiale;
- diametro esterno e spessore;
- marchio di fabbrica;
- data di produzione;
- codice della linea di produzione;
- marchi di qualità ai quali il prodotto è conforme.

I raccordi PP di Valsir riportano:

- la norma di riferimento (EN 1451);
- i diametri di giunzione;
- l'area di applicazione (B);
- la specifica del materiale;
- l'angolo caratteristico (per le curve e le braghe);
- il marchio di fabbrica;
- la data di produzione.

Fig. 1 Marcatura del tubo e della raccorderia. - *Marking of the pipe and fittings.*

Polypropylene has a coefficient of linear expansion equal to:

$$\lambda = 1,1 \times 10^{-4} \cdot ^\circ\text{C}^{-1} \text{ equal to } 0,11 \text{ mm/m} \cdot ^\circ\text{C}$$

The Valsir PP system is characterised by push-fit connections with seals and consequently does not require expansion sockets, in that each joint, when correctly installed, allows the material to expand and contract in the presence of temperature fluctuations.

## Material

The PP pipes and fittings are produced by Valsir with flame retardant homo-polymer polypropylene in compliance with the European and International standards in force.

## Colour

The Valsir fittings in flame retardant polypropylene are grey in colour (RAL 7037) and are UV stabilized. They are smooth and shiny and free of any irregularities that could affect their performance.

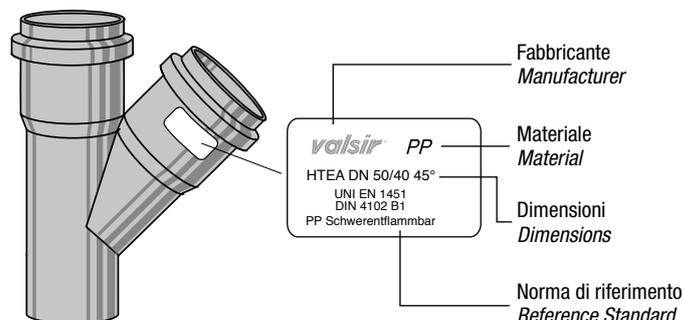

## Marking

As in compliance with the European Standard UNI EN 1451-1 currently in force, Valsir pipes carry the following indications:

- reference standard (EN 1451);
- application specification (B);
- material specification;
- external diameter and thickness;
- producer's trademark;
- production date;
- extrusion line specification;
- product approvals.

Valsir PP fittings have the following markings:

- reference standard (EN 1451);
- coupling diameters;
- application specification (B);
- material specification;
- specific angle (for bends and branches);
- producer's trademark;
- production date.

## DATI TECNICI

I diametri nominali, gli spessori nominali e le relative tolleranze dei tubi in PP Valsir sono riportati nella tabella seguente. Tutti i valori dimensionali sono conformi a quelli definiti dalla norma di riferimento UNI EN 1451.

Diametro nominale <i>Nominal diameter</i> DN [mm]	Diametro esterno <i>External diameter</i> De [mm]	Diametro esterno medio minimo e massimo <i>Minimum and maximum average external diameter</i> [mm]		Spessore <i>Thickness</i> s [mm]		Serie <i>Series</i> S
30	32	32,0	32,3	1,8	+0,4/0	S 20
40	40	40,0	40,3	1,8	+0,4/0	
50	50	50,0	50,3	1,8	+0,4/0	
70	75	75,0	75,4	1,9	+0,4/0	
90	90	90,0	90,4	2,2	+0,5/0	
100	110	110,0	110,4	2,7	+0,5/0	
125	125	125,0	125,4	3,1	+0,6/0	
150	160	160,0	160,5	3,9	+0,6/0	

**N.B.** Per le modalità di installazione, caratteristiche tecniche, criteri di posa e progettualità si faccia riferimento al relativo manuale tecnico scarico Valsir "Sistemi di scarico all'interno degli edifici", L02-347.

## TECHNICAL DATA

*The nominal diameters, wall thicknesses and relative tolerances of the pipes are indicated in the following table. The values are in compliance with the European Standard EN 1451.*

*For information on installation, technical specifications, and design criteria we recommend you consult Valsir technical manual "Waste systems inside buildings", L02-345.*

## CRITERI DI TRASPORTO E STOCCAGGIO

### Movimentazione

I tubi vanno sistemati in modo ordinato e razionale per il trasporto, curando che siano convenientemente appoggiati per l'intera lunghezza (distanziati se trattasi di tubi bicchierati) e che siano maneggiati durante le operazioni di carico e scarico in modo da evitare urti violenti, abrasioni, deformazioni. Tale raccomandazione vale a maggior ragione in caso di temperature rigide, tali da poter originare fenomeni di infragilimento. In cantiere maneggiare tubi e raccordi con altrettanta cura e sempre in modo tale da evitare ogni possibile alterazione dei manufatti o inserimenti e sovrapposizioni di terriccio, ghiaia, fango o materiale estraneo in genere in particolare sulle guarnizioni ed all'interno dei bicchieri.

### Stoccaggio

Immagazzinare i tubi in ambiente il più possibile protetto da intemperie, basse temperature, luce solare diretta appoggiandoli su superfici orizzontali ed uniformi; fare in modo che appoggino convenientemente su traversine di legno o, in caso di tubi bicchierati, razionalmente sugli elementi dell'imballo se questo è allo scopo strutturato e realizzato con materiale consono come legno o plastica in genere. Al fine di evitare deformazioni o alterazioni alla geometria dei tubi e dei bicchieri con conseguente possibile pregiudizio della funzionalità delle guarnizioni e quindi della corretta tenuta delle giunzioni, evitare la formazione, specialmente in caso di stoccaggi prolungati, di cataste di altezza superiore a 1,70 m, quali che siano i diametri interessati. Non lasciare il materiale all'aperto ed esposto alla luce solare diretta per periodi eccessivamente prolungati (oltre 18 mesi).

## TRANSPORT, STORAGE AND HANDLING

### Handling

*Pipes shall be positioned in an orderly and rational manner for transport, making sure the entire length of the pipe is suitably supported (and suitably spaced if transporting socketed pipes) and care shall also be taken during loading and unloading in order to avoid violent impacts, abrasions and crushing. This is particularly important in freezing temperatures that can cause the material to become fragile. On the building site, the pipes and fittings shall be handled carefully to avoid any possible alteration to the products as well as the possibility of soil, gravel, mud or foreign matter in general, entering the pipes and seals inside the sockets.*

### Storage

*Where possible the pipes should be stored in a protected environment where they are to be placed on horizontal and uniform surfaces; they should be suitably positioned on wooden supports or, if storing socketed pipes, these should be positioned on the packaging elements if suitably structured and made of an appropriate material such as wood or plastic in general.*

*In order to avoid deformation or alteration to the geometry of the pipes and sockets with the subsequent risk of compromising the correct functioning of the seals, care should be taken to avoid the formation, especially in the case of long-term storage, of stacks that exceed 1.70 m in height, whatever the pipe diameter. Do not leave the material in the open and exposed to direct sunlight for excessively long periods (over 18 months).*

**QUALITÀ CONDIVISA  
COMBINED QUALITY**

Da sempre attenta ai principi di innalzamento dei livelli di affidabilità, Valsir ha introdotto per tutte le unità produttive e per tutti i processi di produzione il sistema di Qualità in conformità alla normativa UNI EN ISO 9001:2008. Questo schema normativo ha ulteriormente valorizzato tutte le attività che concorrono alla piena soddisfazione del cliente, potenziando la formazione delle risorse umane al lavoro in Valsir, affinché vengano condivisi e raggiunti gli obiettivi di miglioramento stabiliti.

Valsir è attualmente concessionaria di oltre 151 omologazioni di prodotto in tutto il mondo (dato aggiornato al 28/12/2010), a garanzia del fatto che l'intera gamma di articoli risponde ai requisiti qualitativi richiesti dalle direttive. Valsir effettua numerose verifiche non richieste dalle normative ma indispensabili per garantire al cliente sistemi di assoluta eccellenza qualitativa. La verifica dei processi di lavorazione, i controlli sulle materie prime, le analisi di laboratorio, le prove di sforzo, le simulazioni d'installazione, gli investimenti tecnologici conferiscono valore aggiunto al know-how di Valsir.

*Achieving higher and higher reliability has always been of particular importance for Valsir and to do a Quality System in compliance with the UNI EN ISO 9001:2008 Standard has been introduced to manage all of the production units and production processes. This regulatory scheme has further improved all the activities that contribute to the total satisfaction of the customer, strengthening the training procedures for Valsir staff so that the established improvement goals are shared and achieved by all.*

*Valsir currently holds over 151 product approvals around the world (datum updated on 28/12/2010), a guarantee of the fact that the entire range of products meets the quality requirements of the directives. In addition Valsir carries out numerous tests that are not specifically required by the standards but are regarded as essential to offer to the Customers products of absolute quality excellence. Inspections of the manufacturing processes, tests on the raw materials, laboratory analyses, stress tests, installation simulations, and technological investments award added value to Valsir know-how.*

La Gamma Valsir - *The Valsir range***valsir PEHD**

Sistema di scarico in polietilene ad alta densità a saldare.  
*High density polyethylene electro-fusion waste and drainage system.*

**valsir Pexal**

Sistema in tubazione multistrato per la distribuzione idrica.  
*Multilayer piping system for water supply.*

**valsir SISTEMI RADIANTI**  
RADIANT SYSTEMS

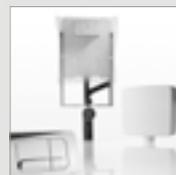

Sistema di riscaldamento e raffreddamento a pavimento.  
*Underfloor heating and cooling system.*

**valsir PP**

Sistema di scarico in polipropilene autoestinguente ad innesto.  
*Push-fit flame retardant polypropylene waste and drainage system.*

**valsir Mixal**

Sistema in tubazione multistrato per la distribuzione idrica.  
*Multilayer piping system for water supply.*

**valsir CASSETTE**  
FLUSH CISTERNS

Cassette di risciacquamento e placche di comando.  
*Flush cisterns and push plates.*

**valsir TRI PLUS**

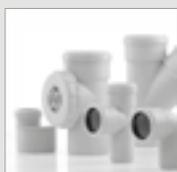

Sistema di scarico a triplice strato ad innesto.  
*Push-fit triple layer waste and drainage system.*

**valsir Pexal**  
EASU

Gamma di raccordi per la distribuzione idrica.  
*Range of fittings for water supply system.*

**valsir ARIA**  
PUR

Sistema per il ricambio dell'aria in bagno.  
*Air renewal system for the bathroom.*

**valsir SILERE**

Sistema di scarico fonoassorbente ad innesto.  
*Push-fit soundproof waste and drainage system.*

**valsir Pexal**  
GAS

Sistema in tubazione multistrato per la distribuzione di gas combustibile.  
*Multilayer pipe system for the distribution of combustible gas.*

**valsir**  
design

Placche di comando e sistemi doccia a filo pavimento.  
*Push plates and floor level shower systems.*

**valsir SIFONI**  
TRAPS

Gamma di sifoni in PP e PEHD.  
*HDPE and PP traps.*

**valsir RAIN PLUS**

Sistema di drenaggio sifonico delle acque meteoriche.  
*Siphonic rainwater drainage system.*

**Silvestro**

Software per la progettazione degli impianti idrotermosanitari.  
*Software for the design of plumbing and heating systems.*
